## Comprehensive, Cloud-based IAM (IDaaS)

◐SailPoint™

Managing access to information in today's dynamic, data-driven environment is a challenge, one that requires much more from identity and access management (IAM) solutions than ever before. To be effective, these solutions must deliver access to all the applications and information that business users need, when they need it, from wherever they are — while at the same time ensuring enterprise security policies are consistently enforced. And they must provide the transparency and proof of strong controls to satisfy audit and compliance requirements.

SailPoint is the recognized leader in identity and access management. IdentityNow is built on SailPoint's extensive experience in identity, governance and, compliance best practice experience and enterprise integration expertise. SailPoint is the undisputed leader in identity. Trust SailPoint to solve your complex identity and access management challenges.
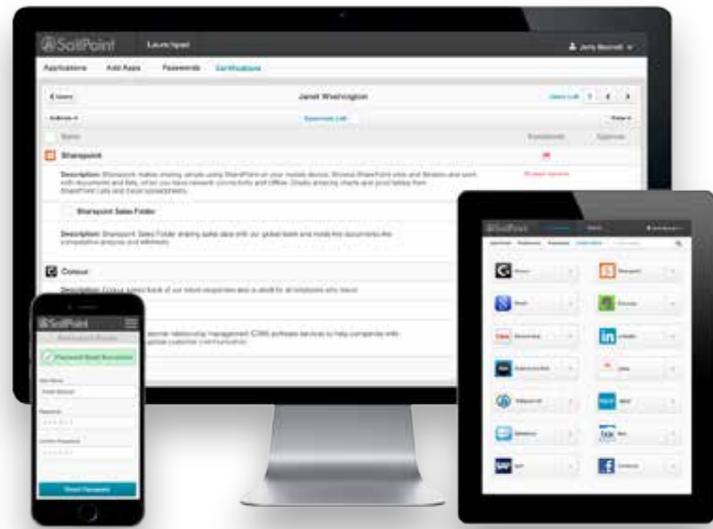

The dynamic and complex nature of securing access while enabling the business requires a new approach, one that puts identity at the center. IdentityNow makes the entire user population more productive, while giving IT the tools it needs to proactively mitigate risk and secure access to critical applications and data whether they reside in the cloud or in the data center. And since it's delivered from the cloud, it can be up and running quickly with no additional hardware or software to buy, deploy and maintain.

User Provisioning

IdentityNow Provisioning ensures that users are productive from "day one" through the automated provisioning of user accounts across on-premises and SaaS applications. IdentityNow's centralized user lifecycle management approach allows IT administrators to manage user on-boarding and off-boarding processes using simple to configure, pre-defined identity lifecycle models to automatically trigger changes to application accounts and entitlements. Built-in workflows speed deployment and enable organizations to ensure users have the right access at the right time to your key applications.

- Automated birth-right provisioning to all applications
- Automated de-provisioning of terminated employees
- Pre-defined access profiles and workflows
- Centralized reporting and analytics

Password Management

IdentityNow Password Management delivers a unified, simple-to-use solution for managing user passwords across cloud, mobile and on-premises applications. IdentityNow provides business users with intuitive self-service features to manage and reset passwords while enforcing enterprise-grade password policies. Powerful delegated administration capabilities allow the help desk to easily reset passwords, unlock accounts and verify user information, without providing administrative access to the application. The flexible user interface can be accessed from a desktop browser or mobile device.

- Self-service and delegated password reset from any device on any network
- Consistent enforcement of password policies
- Multiple strong-authentication options
- Automated password change intercept and sync across all apps

Single Sign-on

IdentityNow Single Sign-On provides users with secure, one-click access to all their applications – cloud, mobile and on-premises – from any device, anywhere in the world. IdentityNow's user interface is as simple as a smartphone to operate and eliminates the need for users to remember and enter multiple user names and passwords. An integrated, governance-based approach centralizes visibility, allows IT to define application access policies and ensures consistent enforcement of security policies.

- Convenient one-click access to any application from any device
- Controls access and eliminates passwords when possible
- Flexible application of strong-authentication policy based on user or access risk
- Increased visibility into application usage

Access Certifications

IdentityNow Access Certification streamlines the process of reviewing user access rights across the organization by initiating campaigns for business managers to approve or revoke access as part of a centralized governance program. Using pre-defined templates and best practices, IdentityNow enables organizations to quickly plan, schedule, and execute certification campaigns to ensure appropriate and timely review of user access.

- Wizard-driven setup and execution of access reviews
- Business-friendly interface and consumer-simple experience
- Proactive identification of inappropriate access and automated, closed-loop remediation of excess privileges
- Informative dashboards, charts and audit reports

IdentityNow Allows Customers to:

🔒 **Mitigate Risk of Inappropriate Access**

⚙️ **Boost Productivity While Reducing Costs**

🔍 **Improve Audit Performance**

🏅 **Increase User Satisfaction**

The difference is clear.

- IdentityNow is the only IAM-as-a-service (IDaaS) solution that delivers a comprehensive approach to user provisioning, password management, single sign-on, and compliance.

- IdentityNow is designed for today's complex hybrid IT environments and unifies identity management processes across cloud, mobile and on-premises environments.

- IdentityNow is built on SailPoint's industry leading, patented encryption and security technology.
